

Join Us in Revolutionizing the Construction Industry

Parspec is transforming how \$5 trillion in building construction products are sold annually around the world by digitizing and organizing the industry's product data. By making this data more accessible and useful, our digital platform enables designers and builders to quickly identify the right products for their projects and helps the supply chain to generate new leads and close deals faster. These benefits are enabled by proprietary AI and workflow automation technology.

Founded in 2021, Parspec has raised over \$11M in seed financing from leading deep tech and construction industry investors to achieve its ambitious mission, including Innovation Endeavors (founded by former Google CEO Eric Schmidt). We invite you to be at the forefront of innovation for one of the oldest and largest industries in the world!

Leadership

Parspec is helmed by technologists and construction supply chain veterans with a common passion to digitally transform our industry.

FOUNDERS

- [Forest Flager](#) (Co-Founder & CEO) - Former Director of Software at Katerra and Stanford University faculty member; Stanford BS, PhD. MIT MEng. Harvard MDes.
- [Pratyush Havelia](#) (Co-Founder & CTO) - Construction-tech engineering leader for 10+ years; Stanford MS & MEng, IIT-R B.Tech.

India Leadership:

- [Abhijit Mitra](#) (Director of Engineering) - 10+ years of experience building highly scalable systems, microservices, distributed systems, data pipeline architecture; ex-Tekion; Gauhati University B.Tech.
- [Rajasekar Murugan](#) (Director of Engineering) - 17.5 years of experience in engineering leadership across a wide range of industries – from digital banking and financial services to e-commerce and enterprise data storage
- [Anjali Sinha](#) (Product Manager) - a seasoned product leader with 7+ years of experience in project & product management, operations strategy, and analytics; National University of Singapore - M.Tech
- [Sharique Arshi](#) (Lead Software Architect) - 12+ years of experience in software engineering with distributed systems, architecture design, microservices; IIT-G B.Tech.
- [Saurabh Khemka](#) (AI Lead) - 8+ years of industrial experience in large scale model building and deployment, PhD in Neuroscience - Switzerland, IIT-R B.Tech
- [Sameer Kulkarni](#) - (HR and Operations Lead) 7+ years of experience across a number of HR and Operations roles including learning and development, organizational development and project management; SPPU - Masters in Industrial and Organizational Psychology

ROLE SUMMARY

We are seeking a dynamic Software Engineer - 2 (SE-2) to join Parspec's talented engineering team. This pivotal role requires a blend of backend system design, coding expertise, project leadership, cross-functional collaboration, and mentoring. As an SE-2, you will drive the delivery of innovative features, ensuring robustness, scalability, and seamless integration with Parspec's AI-powered platform.

You will collaborate closely with the Product, Frontend, and AI teams to transform feature ideas into reliable solutions, playing an active role in the product lifecycle from estimation to production deployment & its associated support.

RESPONSIBILITIES

- **Feature Development:** Design, develop, and maintain backend systems (including APIs, messaging solution) to support new features while ensuring modular code design, maintainability.
- **Performance Optimization:** Implement design patterns and create systems that are highly performant (exhibiting sub-second latency)
- **System Scalability:** Build backend systems capable of scaling efficiently with increasing user demands.
- **Project Leadership:** Lead feature/project lifecycle, from estimation to delivery, collaborating with cross-functional teams.
- **System Design:** Architect and optimize distributed backend systems, ensuring low latency, high availability, and maintainability.
- **Team Collaboration:** Act as the key point of coordination between Frontend, AI, and Backend teams to deliver cohesive features.
- **Code Ownership:** Maintain high standards of code quality through reviews, modular design, and adherence to best practices.
- **Infrastructure Management:** Deploy, maintain, and optimize backend services and infrastructure on AWS/GCP.
- **Testing and Debugging:** Ensure thorough testing of features and tackle debugging challenges in production systems.

WHO YOU ARE

- **Experience:** 3+ years in backend software development, with demonstrable success in leading project-level initiatives.
- **Technical Expertise:** Strong grasp of Python, Golang, or equivalent object-oriented programming languages.
- **Database Proficiency:** Hands-on experience with MySQL (knowledge or hands-on on PostgreSQL, MongoDB, Dynamo db, elasticsearch is preferred since we use - Postgres, MongoDB, dynamo db and elasticsearch in parspec ecosystem), schema design, and query optimization.

- **Problem-Solver:** Proven ability to navigate complex problems and build scalable solutions in distributed systems.
- **Collaborator:** Strong communication skills and the ability to work across teams, including Product, AI, and Frontend.
- **Self-Starter:** Entrepreneurial mindset with a passion for taking ownership and driving impactful results.

REQUIREMENTS

Must-Haves:

- Proficiency in backend software development with Python, Golang, or similar languages.
- Strong understanding of RESTful APIs, SOA, and microservice architectures.
- Experience deploying and managing services on AWS and GCP.
- Hand-on on Mysql db
- Familiarity with containerization tools (Docker) and CI/CD pipelines.
- Skilled in performance optimization and debugging in distributed systems.
- Experience leading technical projects and mentoring junior team members.

Preferred:

- Experience implementing design patterns and writing modular, maintainable code.
- Exposure to AI/ML pipelines and Elasticsearch integration.
- Hands-on on Postgres, mongo db, dynamo db & elasticsearch is preferred.
- Knowledge of web servers and distributed systems and its architecture.
- Experience with GraphQL
- Experience with frontend-backend coordination in feature development.
- Familiarity with data pipeline technologies and AI-powered search workflows.
- Familiarity with git, GitHub, code review processes and CI/CD pipelines.
